

The TELESTEPS® Loft Ladder

The TELESTEPS® Loft Ladder is the world's first truly telescopic loft ladder. Compact, stable and safe to climb, the TELESTEPS® comes fully assembled and installs by fitting just six screws. It is extremely compact, and fits almost any size of hatch down to 520mm x 600mm.

All vital components are made from anodised aluminium that will never rust.

Accessing your loft is as easy as A, B, C

A. Open the hatch

When the TELESTEPS® Loft Ladder isn't in use it is fully retracted and very space saving. The adjustable models fit completely within the attic hatch and don't steal any attic storage space at all.

B. Let down the ladder

When the attic hatch is opened, simply pull down the ladder holder, release the ladder latch and pull out the ladder to its full length.

C. Your loft ladder is ready to climb

The TELESTEPS® Loft Ladder has a smooth surface that is comfortable to hold. A stable construction and wide treads with grooved surfaces make the climbing safe and comfortable.
